

Uncover the secrets of
geology hidden in
the ICGC, in Tremp.

Come, child, to play
with the secrets of
stones, ready to be
discovered.

Where
stones

January 2017

This activity book was created to have fun and promote the building called "El Rovellat".

This project started when Glòria Llompart, our arts teacher, encouraged us to create a product for real life use. We decided to design an activity book for kids, using "The Rovellat" as a leading topic to engage children in playful and funny activities about geology.

The designers are:

Mama Ben Kacem

Nerea Coll

Mercè Feliu

Adrià Ibáñez

Isabel Borràs

Àlex Uriach

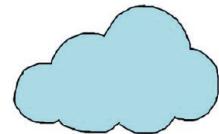

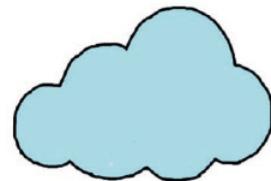

Bintou Diallo

Khadija Adjar

Cristina Gimó

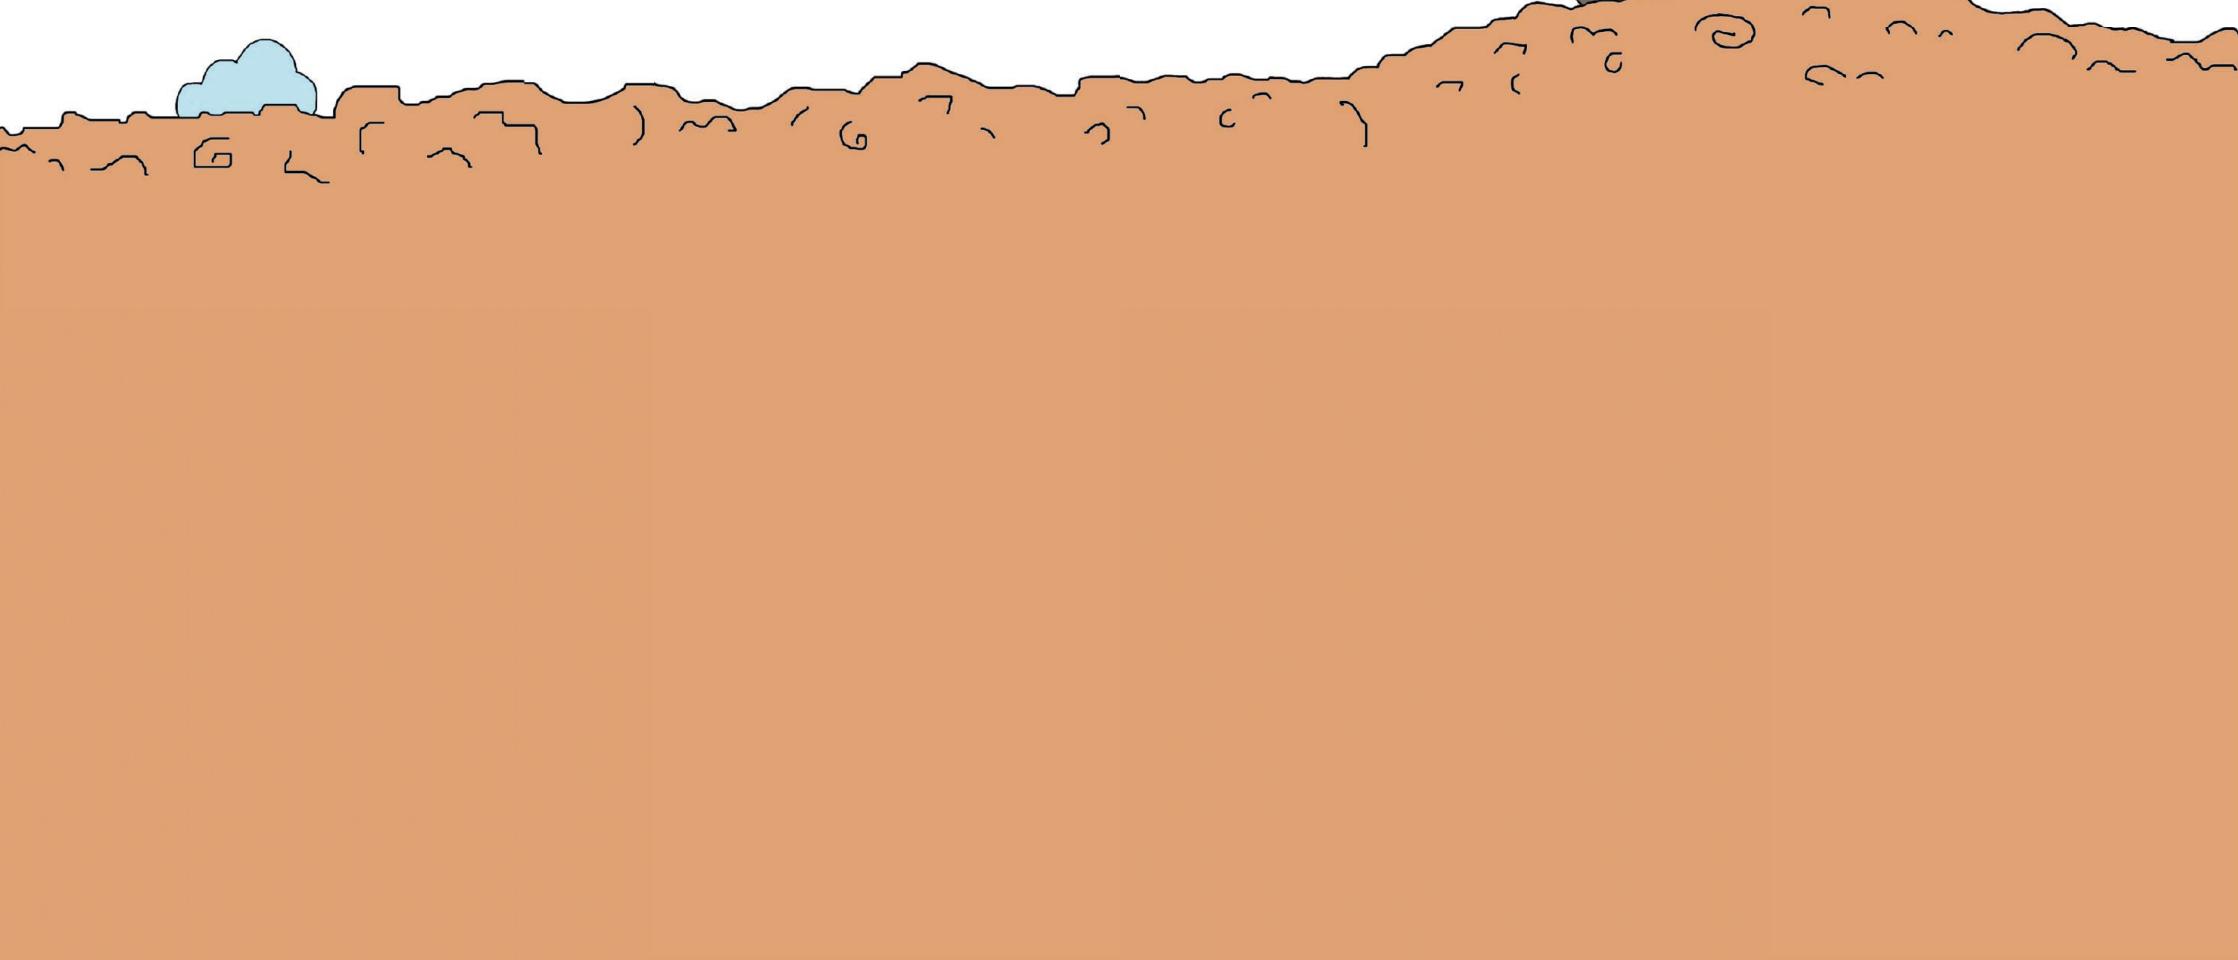

Yael Gamez

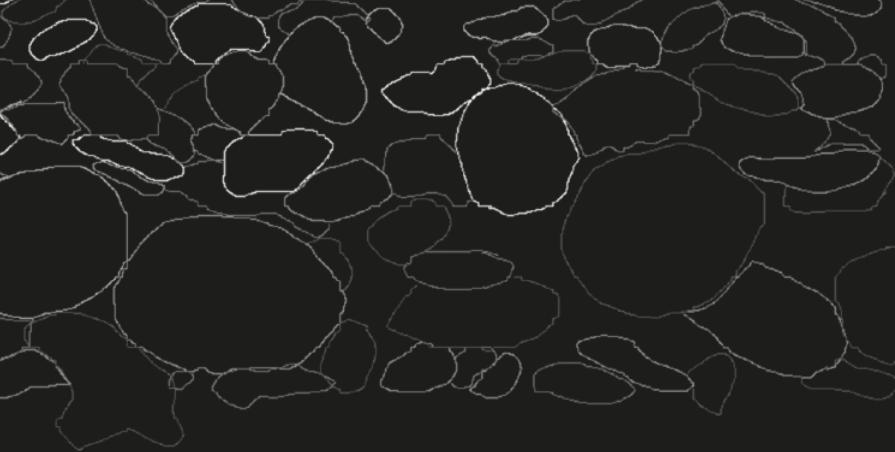

We would like to thank Carles Aguilar for his time and his help.

HELP!

This geologist needs your
help to find new objects
Draw what you think he will find
underground .

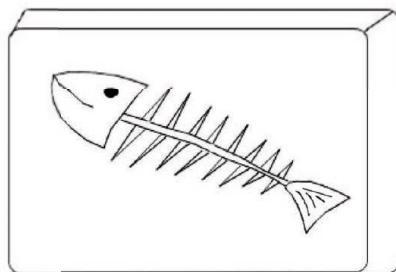

Try to find
a stone that can be used
to draw on white and
make some sketches.

Now, find another stone
that can be used to draw
on brown or vermillion.

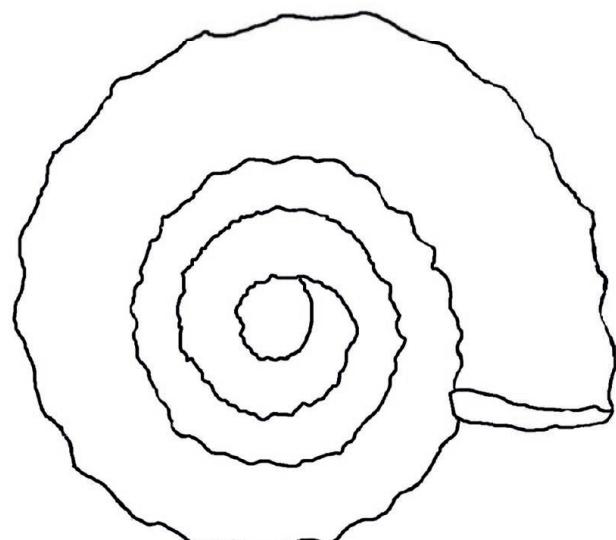

Write the name of the geological stones below the images...

D -- M -- D

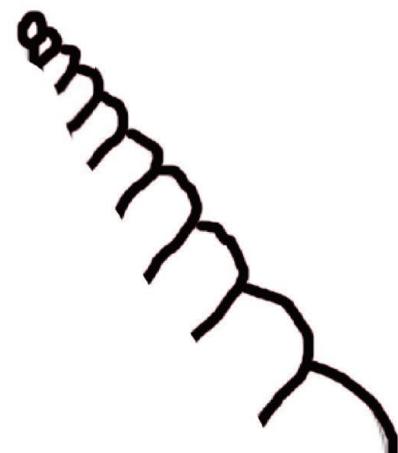

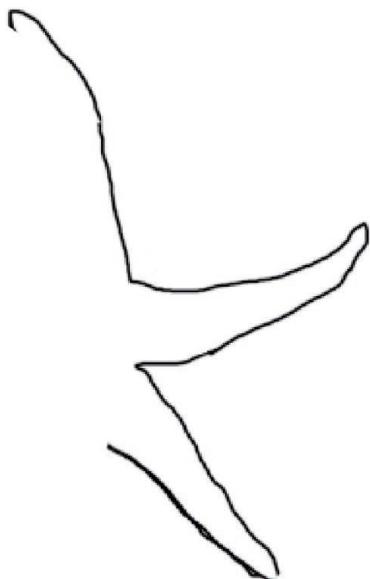

F - S - F - S - I -

A - M - - I - E

...Try to guess the name of the stones from the letters that you have, and then, paint them.

Draw the other half
of these fossils...
and paint the drawings.

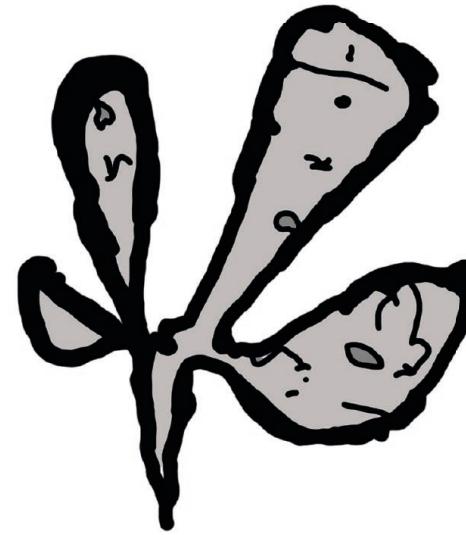

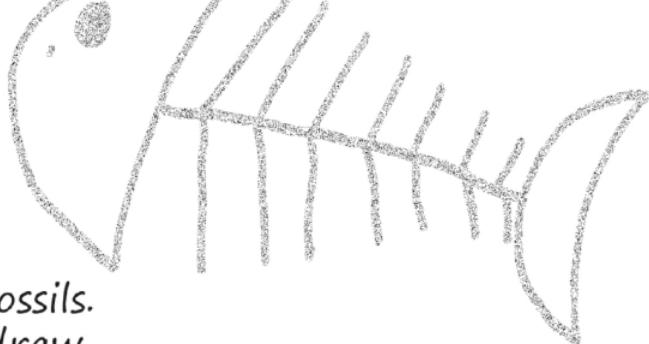

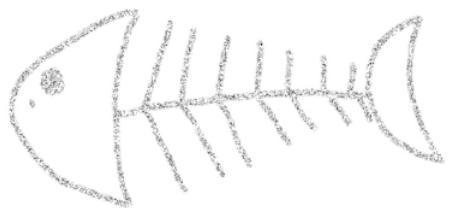

In some buildings
there are some fossils on the walls.
Look for them and imagine
what they were before.

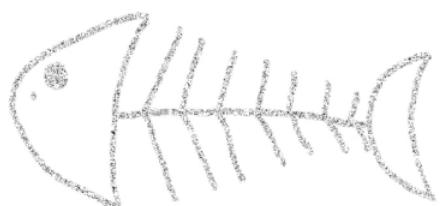

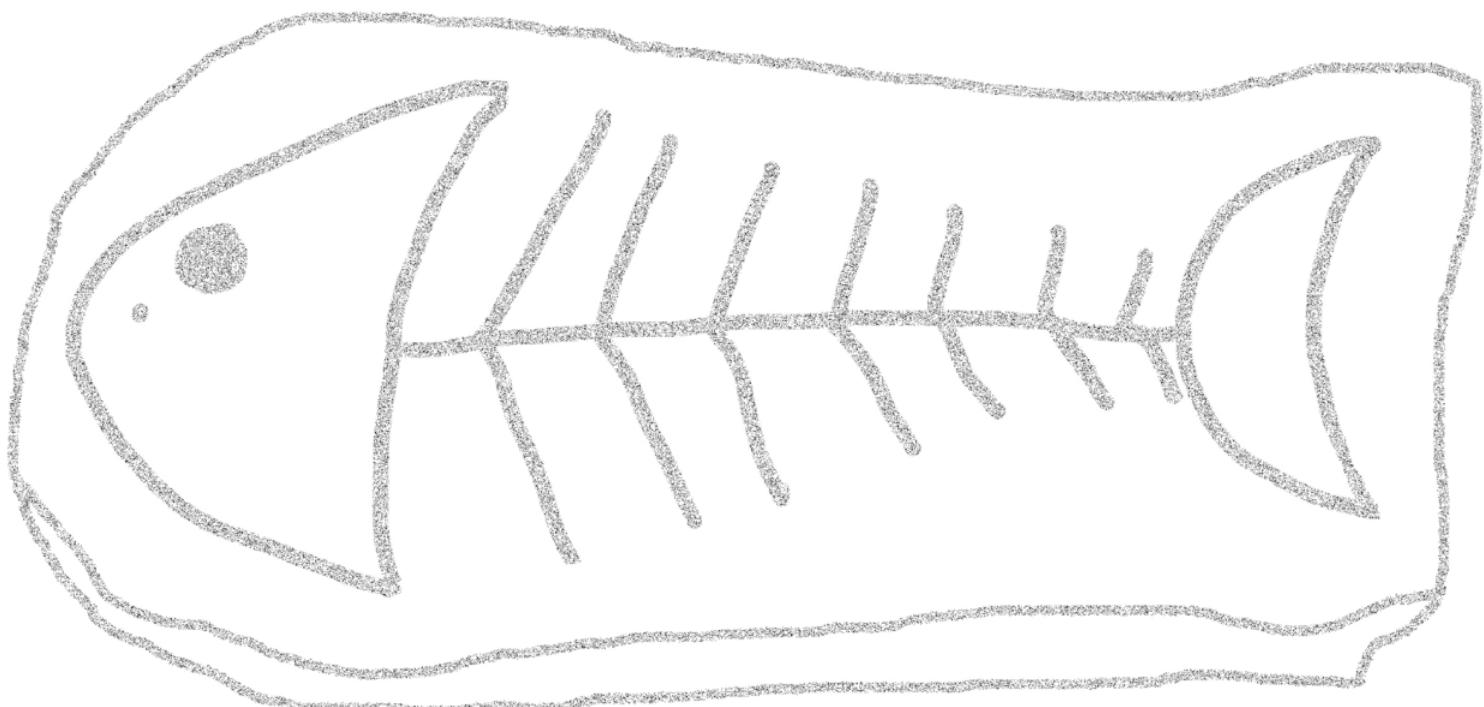

Inside the church.

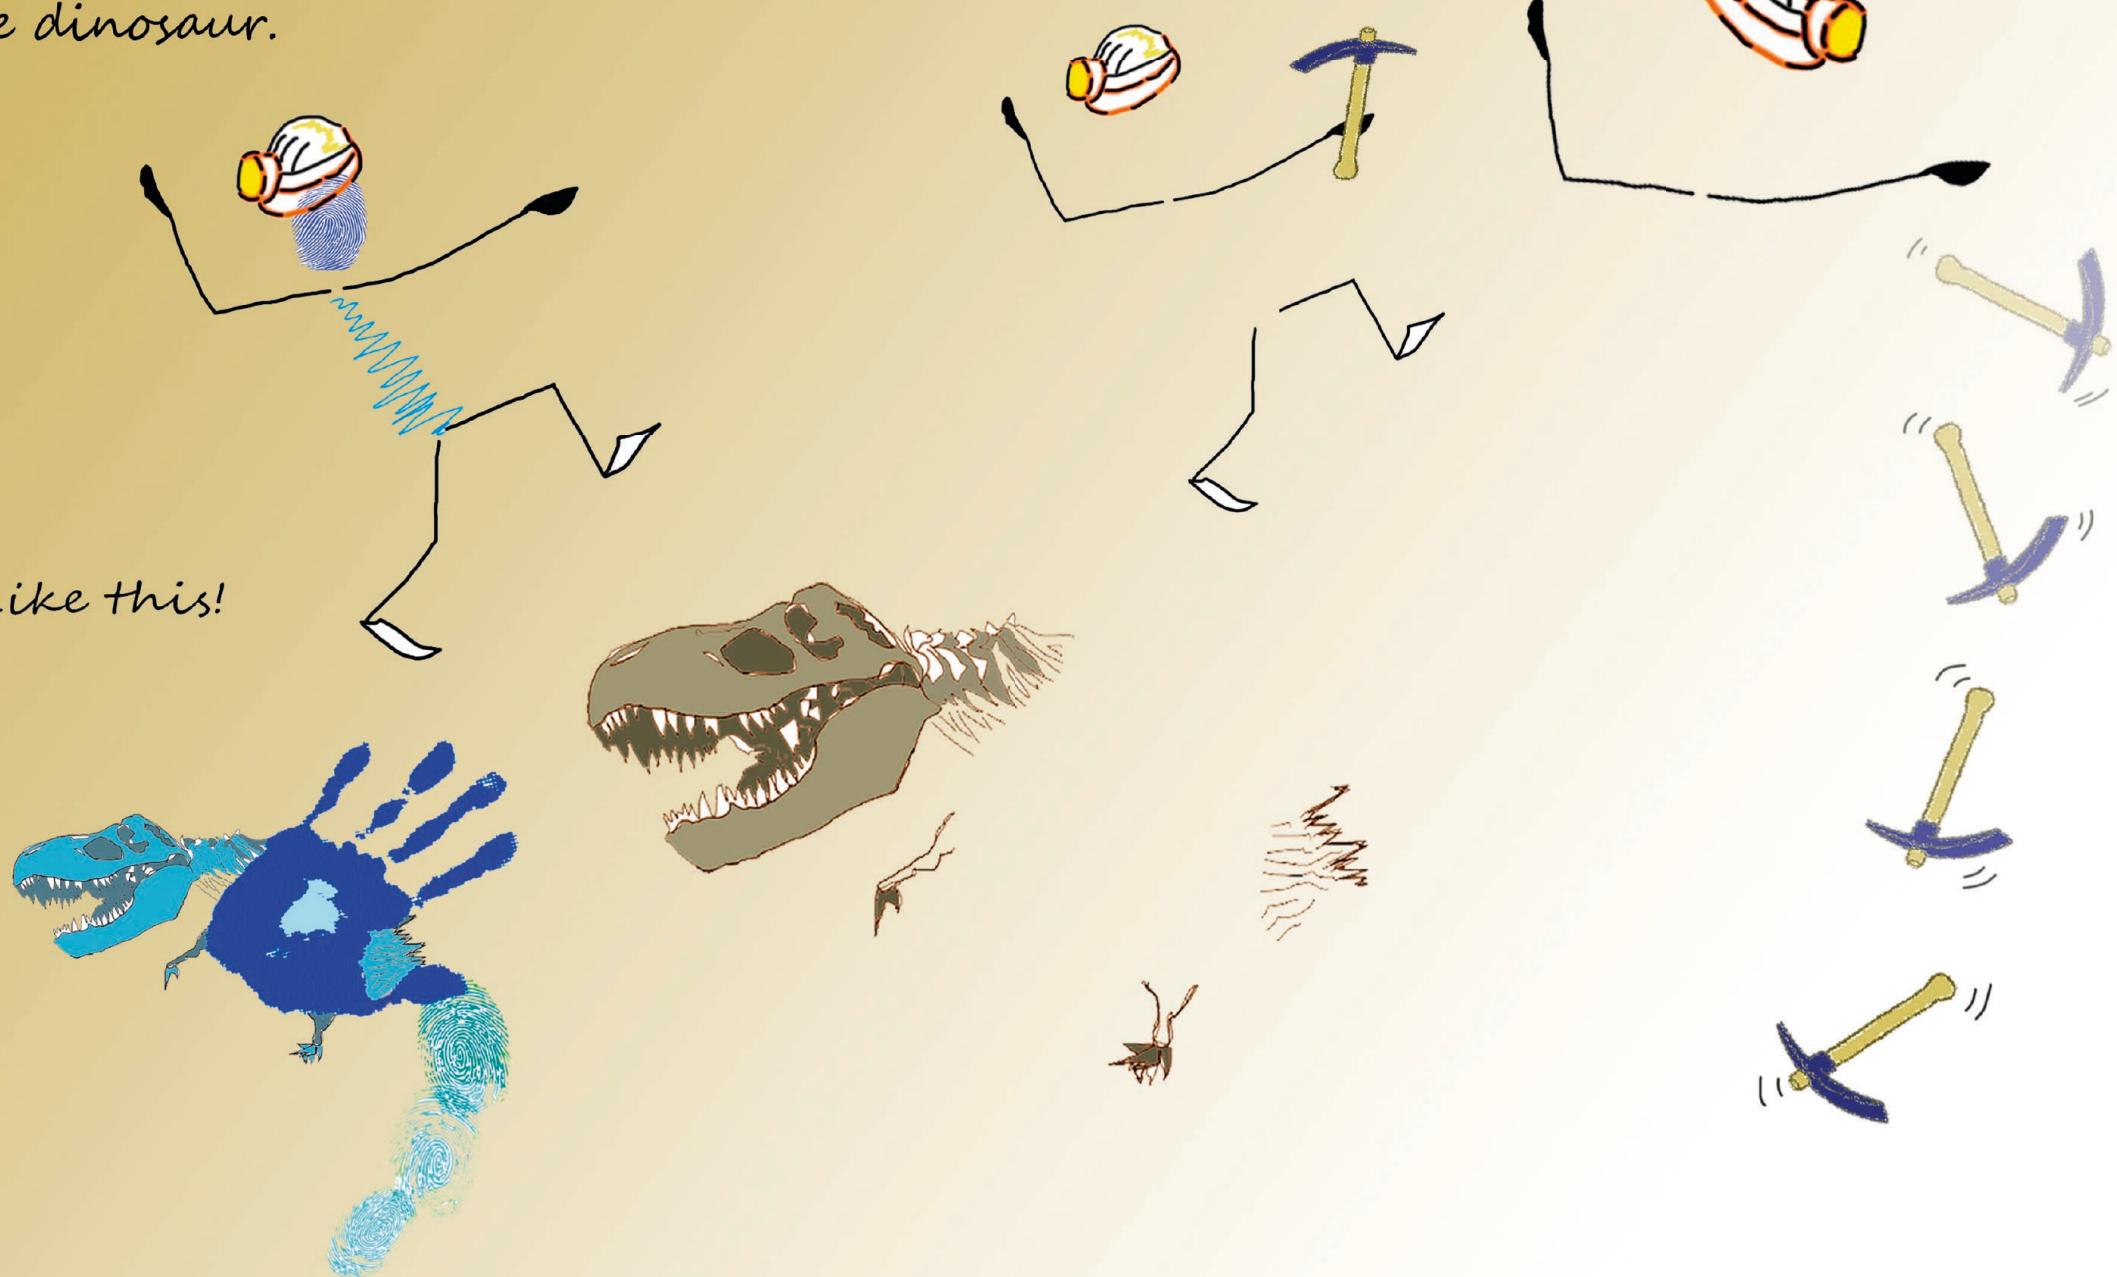

Here there are some fish fossils.
Use your imagination to draw
what they were before.

We know you love getting your fingers dirty, so paint with your fingerprints to complete the geologist and the dinosaur.

We can find a lot of fossils in Pallars...

Here you have some.

Match their names with the drawings.

sea star

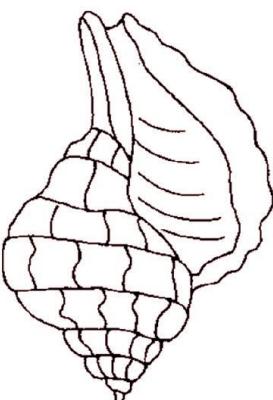

snail

turritella

sea snail

nummulite

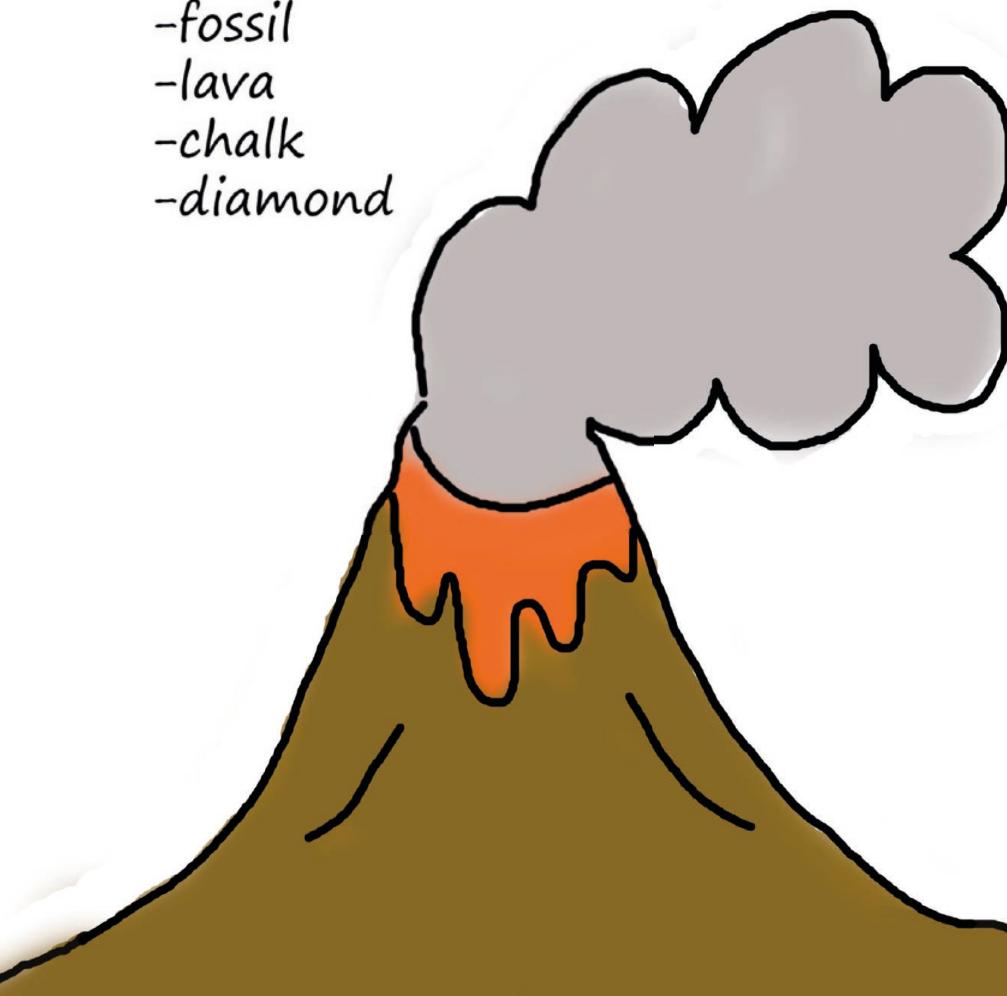

dinosaur bone

Try to find these words in this word-search:

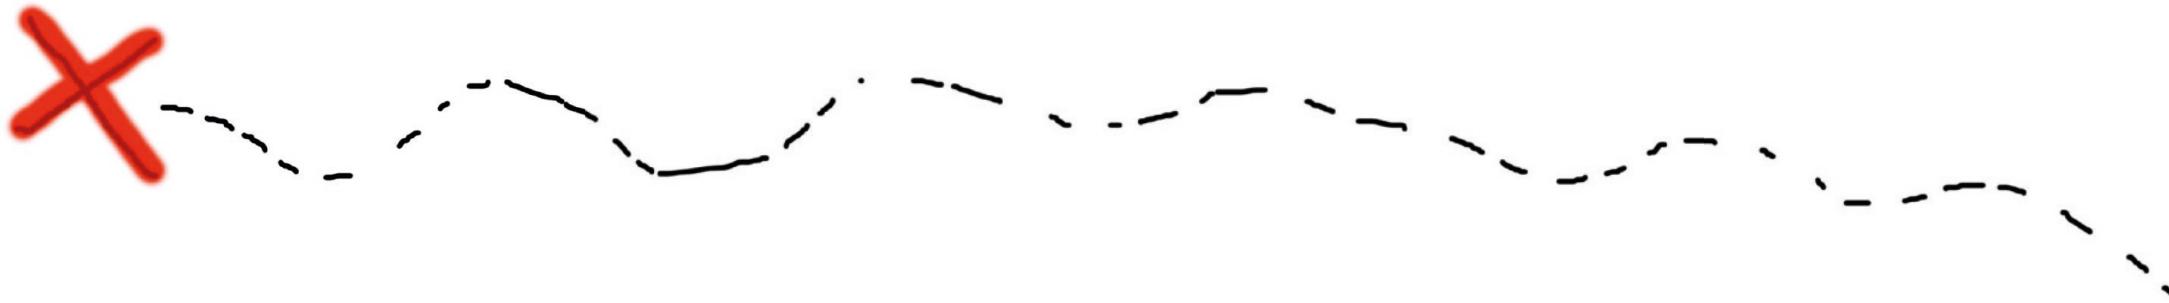

- erosion
- mineral
- volcano
- fossil
- lava
- chalk
- diamond

The stones and the nature of the Pallars have very curious and interesting textures. Find a natural object, paint it and squash it into this space.

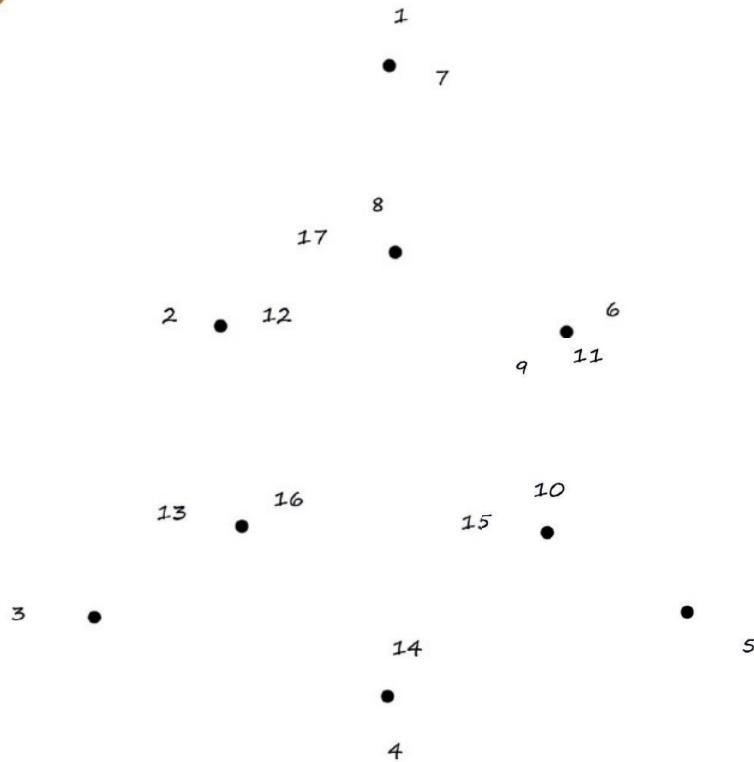

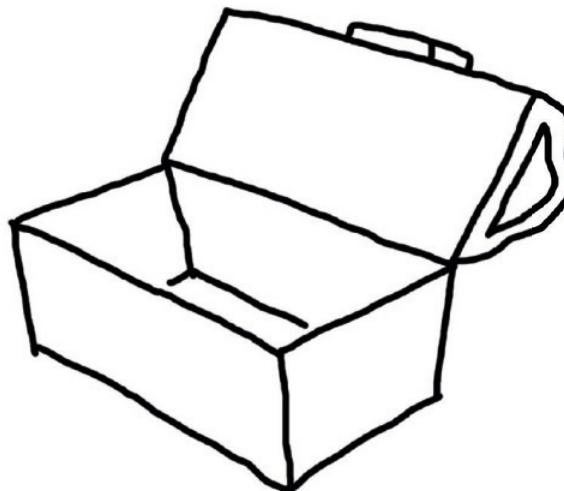

The ICGC isn't only a geological institute. In the "Rovellat", the scientists study cartography. Try to **DRAW** the map of your own fantasy country.

Where would you keep
this precious gem? Draw the boxes
where you would keep it in.

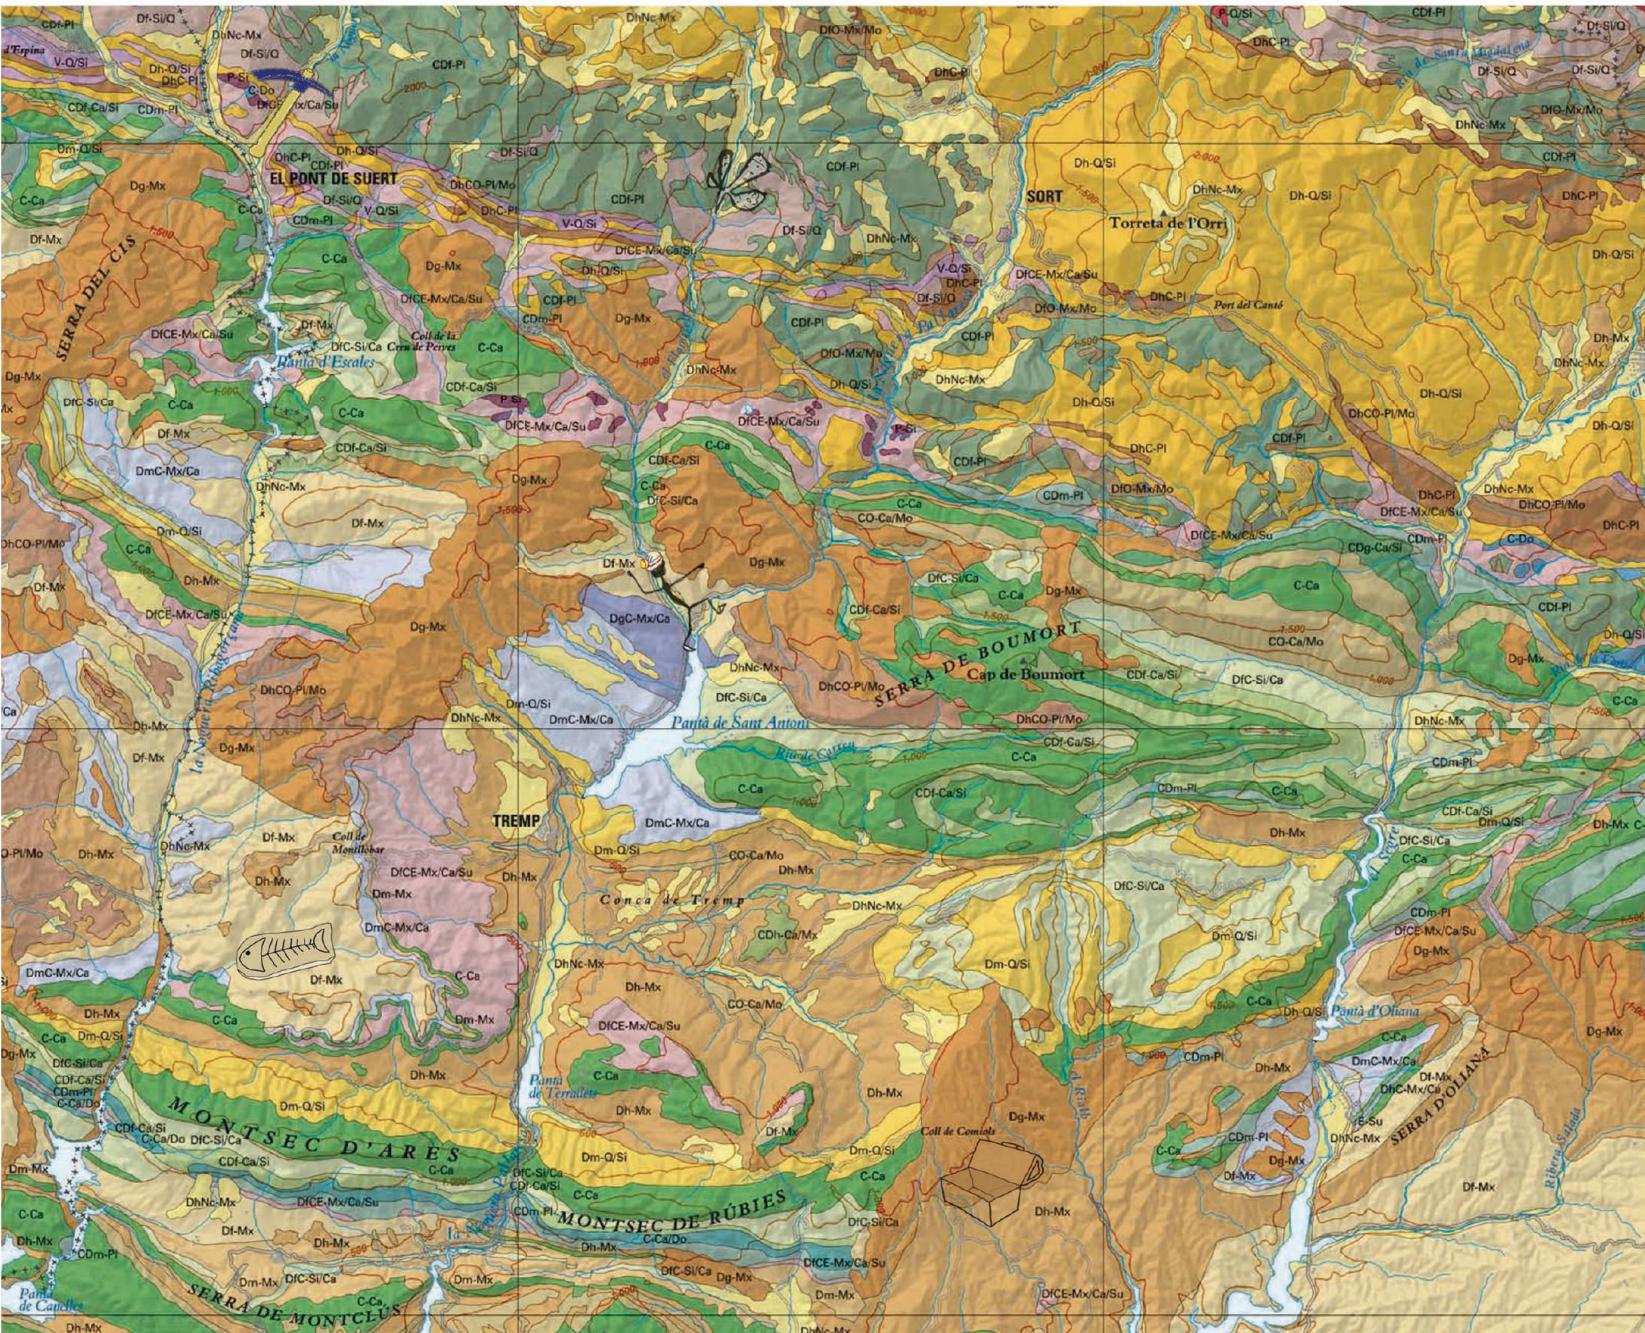

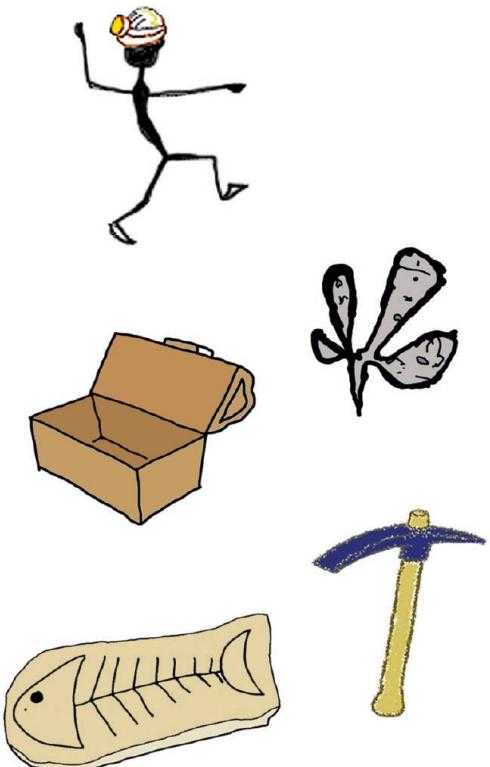

Unite the spots following
the order of the numbers.
You will unveil a precious gem!

Some characters of our Activity Book
are lost in this geological map...

Can you help us to find them?

Can you depict the ICGC building with this model?

Cut and paint
or glue some
sand for a better
look or result.
